Shaun,

I wanted to reach out to see if we can get in touch with the right person/contractor that is handling the wastewater treatment with the clean up project of the mine? We produce a Magnesium Hydroxide powder and slurry in Denver, CO. With the low pH of the Animas - I did not know if the EPA was looking for solutions to bring the river pH back up. We would be happy to assist any way that we can.

Thank you,

--
